Shorter fibres, such as the superfine lambswool used in this quality, can be more likely to pill than longer fibres. This is because these softer, more luxurious short fibres must be gently twisted when they're spun into woollen yarn to preserve soft feel and light weight.

Pilling is simply a natural occurrence on a new knitted garment as the loose fibres in the twist shed during the first wear of the garment. Pilling is not a sign of poor-quality wool but is often in fact, the exact opposite.

Take care of your knitted garments by removing the pills before washing.
